

SCENARIO ANALYSIS

Business model scenarios

Nine ways a company can build in the move-out market, and the modelled odds of revenue, funding and exit for each, 2026 to 2032.

SUMMARY

Selling a completed move-out gives the best odds of revenue and funding.

01 Revenue

Service paths get a paying customer within 12 months 88–89% of the time, against 76% for software.

02 Funding

Service first, then software, leads: 42% reach \$1M in annual revenue by month 36, and 52% raise a seed round.

03 Exit

Exits are modest on every path. The likely exit is a sale to a larger platform.

04 Direction

Growing deeper into the tenancy beats adding owner projects or maintenance.

THE PATHS

Nine paths combine a business shape with a direction for growth.

Software

Tenancy depth
Maintenance
Owner projects

Service

Tenancy
depth, priced
per move-out
Turns and
owner projects

Service first

Tenancy
depth, then
software as
the work
is automated

Engine

Platforms and
deposit
insurers
Consolidators

Operator

Buy a small
management
firm and run it
on Handoff

| Tenancy depth: the move-in record, the turn and the settlement for the same manager.

THE MODEL

Each simulated company runs month by month from October 2026 to October 2032.

Calibrated so a generic software company reproduces public odds of reaching \$1M in revenue and raising each round.

ASSUMPTIONS

Service earns more per move-out and churns less. Software keeps more of each dollar.

ASSUMPTION	SOFTWARE	SERVICE
Price per move-out	\$100–250	\$250–450
Monthly churn	2–4.5%	1.2–3%
Gross margin	65–82%	35–65%
Yearly chance a platform bundles the product	15–35%	8–22%

| A median client manages 400 homes turning 28% a year: about 112 move-outs.

Results

What the odds say

Revenue, funding and exit for each path, and what moves them.

REVENUE

Service paths are the most likely to get a paying customer within 12 months.

Service paths (three)

Software for managers

Engines for platforms or consolidators

Buying a management firm

| A service path ranks first on this measure in all 300 parameter draws.

FUNDING

Service first, then software, leads on revenue and on raising a seed round.

| A service client pays about twice as much a year (\$39k against \$20k) and churns less.

EXIT

Exit odds are close across the leading paths, and every exit is modest.

Median exits for these paths are \$4–10M. Venn paid \$50M for Zuma in 2026.

DIRECTION

Growing deeper into the tenancy beats adding owner projects or maintenance.

The company fails by month 72

Maintenance has the largest upside if its upsell works: first on founder proceeds in 27% of draws.

WHAT WOULD CHANGE THE RANKING

Three close contests turn on facts that a pilot and a few sales calls can measure.

CONTEST	FIRST WINS	WHAT DECIDES IT
Service first against software only	47%	Whether tenancy depth works; what software alone can charge per move-out
Engine against software only	56%	Whether platforms and deposit insurers buy, and at what contract size
Tenancy depth against maintenance	50%	How large the maintenance upsell is, and its churn

Wins are the share of 300 parameter draws in which the first path has higher expected founder proceeds.

WHAT TO TAKE FROM IT

Lead with a completed move-out, sold per outcome, and convert to software as it is measured.

Sell the outcome first. It gets a paying customer soonest and leads on revenue and funding.

Grow deeper, not wider. The move-in record, the turn and the settlement beat owner projects and maintenance.

Plan for a modest exit. The likely end is a sale to a larger platform, at \$4–10M in the median case.

Limits: the odds rest on generic software base rates and judgment ranges, not operator data. Read the rankings, not the levels.
